

DAILY INTERNSHIP REPORT

Submit this report on InnoTrack by 5:00 PM every day

SECTION 1 — STUDENT INFORMATION

Student Name	P Koteswara Rao	VTU ID	VTU 2819
Branch / Dept.	B.Tech / CSE(DS)	Internship Day No.	3
Date	03/06/2026	Track (1 / 2 / 3 / 4)	1
Project Title	Loan Default Risk Prediction-Finance	Mentor Name	jayasri

SECTION 2 — WHAT DID YOU LEARN TODAY?

Topic / Concept Learned (e.g. Random Forest, Flask routing, model saving...)

Today I have learned NumPy, Pandas & Real Data. I have seen different types functions in Numpy and pandas.

In Pandas I have seen series and dataframe. I have sen difference btw those.I have some example programs on those topics.

I have seen the EDA-Exploratory Data Analysis and in that load & shape, Check nulls, Statistics, counts and Group & agg.

SECTION 3 — WHAT DID YOU BUILD TODAY?

Code / Output / Feature Built (e.g. Built EDA section, trained model, created Flask form...)

Today I build different programs on NumPy and Pandas. The programs are NumPy marks analyzer, dataframe builder, CSV explorer, missing data detective, group & compare and Full EDA report.

These programs helps me to understand the numpy and pandas. And EDA concept also. These programs helps me to know about functions.

Today tasks give the hands on coding experience more.

SECTION 4 — PROBLEMS FACED & HOW YOU SOLVED THEM

Error / Problem (e.g. ValueError when scaling — solved by dropping nulls first)

Finding the correct functions and dataset .

How I Fixed I *(Describe your solution or what help you took)*

I fixed through using the google and some references

SECTION 5 — PLAN FOR TOMORROW

What will you do tomorrow? *(e.g. Train Random Forest, compare with Logistic Regression, start Flask app)*

I planned for tomorrow to study about the Matplotlib charts. To know about the different charts in matplotlib.

I have planned to learn about ML. Angoing to built the ML model to understand the concept.

SECTION 6 — LINKS & ATTACHMENTS

GitHub Repo / Commit Link	https://github.com/koteswaraoposa-pixel/Innolift-intership.git
Model Result / Colab Link	
Deployed App Link (if any)	
Additional Notes
